## Summoners war rune optimizer pro

Rune Details (requisite) This is a simple guide to help you extract files from your summoners war account so you can use them in Rune Optimizer software. Part 1 should be the extraction process. (This video) Part 2 should be the explanation for the Optimizer tool. Link: Warning: THIS IS ONLY FOR ANDROID / WINDOWS. I don't have an iphone. NOTE: You can turn off your firewall if you have problems! Subscribe and follow me on the Thanks for watching, have a good day! © founding source of summarynetworks, passionate about new technologies and networking professions, Master of Networks and Telecommunications System. ,I'm dealing with Pascal, Delphi, Java, MATLAB, php ... Tracer package, GNS3, VMware Workstation, Virtual Box, Filezilla (client/server), EasyPhp, Wamp server, WORDPRESS management system..... Installation of surveillance cameras (technology hikvision DVR.....). Hey! We have a very big update coming up this month. Probably one of the biggest changes in recent years regarding SWOP. Not only have all aspects of artifacts been improved, I would also like to introduce you to a brand new tool called SWOP Pro. Let's start with SWOP and this Pro.So is this SWOP Pro? The main difference is that we rewrote optimization from scratch. And not just the optimization itself, also the way we process data. Specifically, this means SWOP Pro will use your GPU, making it 100! (or even more) times faster than the normal version. It certainly exceeded or expectations by a large margin. We didn't stop there, we also rewrote all the sorting, filtering and how we get builds back and it's all written in C-now. This means that there is no longer hanging or crashing and that there is a fluid and eye-catching feeling. You also have the option to recover builds after you cancel your optimization, even if you don't really have too much time to do so, since SWOP Pro is also fast. So let's see an example, with 38 million builds. It was a lot to manage for the normal SWOP version right? Well, let's see here: think that demonstrates the performance difference really well. Let's put it into question how to get this. Its available via the Windows 10 store, and therefore its currently Windows 10 exclusive. Since we invested a lot of time to make this as smooth as possible, SWOP Pro is not free. Its currently in store for 14.99 (once I'm probably not going to get rich with that, because MS takes a good part of it and I also give some to another dev who worked on it with me. MS also took their store ad system a few months ago unfortunately. So I hope you understand. We hope we have produced something, which is worth your money tho! Our testers have given extremely positive feedback and I'm glad to hear from you as well! Ahh, yes, before I forget, there is a one-day trial, so you can try it before you commit. We tested it as best as possible for a bunch of GPUs, but it's still very very new, so if you find something wrong, I'm happy to help. )There are videos of some content creators made (thank you!) about it so you can see it in action:XennialGaming: it Gaming: to the swop pro store page: things first, don't worry the only exclusive feature in SWOP Pro is the new process of optimization and new data processing. Everything I explain now is available for the normal SWOP and SWOP Web version. Although quite frankly, artifact optimization is really limited without SWOP Pro, just because of the amount of joy of potentialbuilds with 8 slots. I really tried to make it happen in normal versions, but it could reach its limit there unfortunately. ./Added first artifact optimizationsInclude key statistics in optimizationFilter artifacts, which do not match your specified artifact sub-states (including min and max filtering)Hover on a build to see the locations of artifactsAdded various options for optimizing artifacts, including turning off and on the efficiency of Added artifacts and max Added Unlock and equip runes and artifactsAdded dropdowns so you can either equip, unlock or equip both (runes and artifacts), runes only or artifacts only Added artifacts to the tab Added artifacts to the Monster SectionInstantly see if there are any missing artifacts on your monstersLock all the artifacts of a monster specificAdded medium artifact efficiency for monstersAdditionally there are other general improvements and fixes. Improved layout of the optimizer section, for example: Damage options are now more importantFixed problem where you could import non-parameters files via the restoration settings function, which SWOPAdded bricks new monsters I really hope you like all the new changes. Actually, I'm really excited this version. Finally, I would like to say: do not feel obliged to support me in any way if you cannot afford it. We are in difficult times so make sure you are okay. I will always support the free version to the best of my abilities. If you would like to support me: Patreon PayPalSWOP (Rune Optimizer): W10 App WebSWOP (Rune Optimizer) Pro: W10 AppSummoners War Exporter (SWEX): GitHub SWEX WebSWAG: additional support, you can join my DISCORDHappy FRR, DiscordHappy, 2 We have detected that JavaScript is disabled in this browser. Please enable JavaScript or switch to a supported browser to continue using twitter.com. You can see a list of supported browsers in our help center. Help Center This is a tool for summoners war players with lots of runes. This is not a guide to the game, and is not a guide to how and when to build your monsters or what monsters you need to build. This tool gives you an overview of all your runes, allowing you to create optimized rune sets from your rune inventory based on configurable filter options such as slot, property, type, etc. You can set the minimum and maximum values of each property and which property to maximize. The result is a preview with the best runes that fit your criteria. With 300 runes, you have more than 15 million possible combinations. We'll help you find the best rune combinations for your monsters. To use this tool, you can reproduce your account manually with the in-app rune and monster editor or you can import a PCAP or JSON file created from your active SW account that contains special definitions of your runes and monsters. NEW: You can now import data files using the internal build-in proxy server. A help file on how to create these files is included. Features:- Create and modify monsters and runes for optimization - Compare statistics when replacing one rune with another- Filter and sort runes for custom builds- Optimizer: Set the type of rune set, the slot stat, the property to maximize and min/max values for each rune. Once optimized, runes can be lockedSpecial: Choose to optimize as an attack monster, defense monster or healer - Import PCAP and JSON-files (HIVE account needed!) - Proxy server for real-time importation (HIVE account needed!) - Help files for all features and functions (sorry for bad English. You can help improve it. Send me an e-mail and I'll replace it. Thanks)I thank Bryan Robinson for the translation
